ABSTRACT OF THE DISCLOSURE

A steering wheel adapted for replacing a rotatable control shaft-mounted finger dial of an RC control unit includes a wheel having a diameter at least as large as at least one dimension of a side of the RC control unit adjacent to the wheel, a coupler located on one side of the wheel for engaging the RC control unit, and at least one bore passing through the wheel. A fastener is positioned within the bore for removably connecting the wheel to the control shaft of the RC control unit.
